

*Optimism is the faith that leads to achievement. Nothing can be done without hope and Confidence.*

—Helen Keller

Greetings from the Editorial Team,

Almost a year into the COVID-19, there finally appears to be some light at the end of the tunnel in the form of a vaccine. The precautions and infection control methods which we dentists have followed seem to have worked to a large extent, taking into consideration the high risks we dentists encountered. As patient confidence in dental treatments are coming back to normal, we should be even more cautious not to let our guard down even momentarily.

The vaccine gives us hope that things might come back to normal by mid of this year and meetings and conferences will become possible by that time . Optimism and hope has been the only thing we had to look forward to in 2020 and let's hope 2021 gives us the confidence to get back to our normal life with as much fun and fervor as we had before the pandemic. Hoping to meet all of you in Conservative and Endodontic Society of Kerala (CAESOK) meeting this year, Special thanks to all members and the executive committee for the help and support.
